

universa iBank - internet banking

Intuitive, customizable and secure modern platform. The iBank – Internet Banking capabilities of the **universa** banking platform allows members/customers of a financial institution access to their accounts in a secure manner.

iBank is typically accessed through the financial institution's website and provides their members/customers with the ability to initiate various electronic transactions and view important details about their account.

It's an integrated suite of core financial processing and management solutions, developed by **smartsolution**.

universa core banking is an integrated enterprise banking system built from the best capabilities of mature banking platforms.

By combining industry best practices with new advances and technologies, we have created the most **comprehensive** browser-based banking system.
